Adult Attention Deficit Disorder

Children are not the only people who experience Attention Deficit Hyperactivity Disorder. Adults with ADHD experience:

- Difficulty completing tasks
- Problems staying focused
- Lack of organization
- Frequently losing things
- Desire to "put off" difficult tasks

If this sounds like you and you are between the ages of 18 and 50, you may qualify for participation in a research study of an FDA approved medication for the treatment of ADHD in adults. Participants will receive a study-related psychiatric evaluation and study medication, or a placebo (sugar pill), at no cost.

For more information please call Dr. Jayesh Kamath at **1-877-252-2225** or visit us at www.uconnresearch.com. This study is being offered at the University of Connecticut Health Center.
